EXPERIENCE

AI/ML

July 2025 – Current

Vision Giants

Multan, Pakistan

- Built and deployed a suite of Islamic apps with backend APIs, database design, real-time data integration, and intuitive user interfaces.
- Integrated AI/ML capabilities including predictive modeling and speech-based interaction to enhance automation and user experience.

PROJECTS

MEDI MIND

April 2026 – June 2026

- Architected an AI-powered medical triage system (FastAPI, Python) using NVIDIA NIM to serve a 3-model fallback chain (Llama 3.1 → Mistral 7B → Phi-3) with a RAG pipeline (ChromaDB + sentence-transformers), extracting symptoms and classifying urgency into 3 triage levels.
- Built the full-stack system end-to-end: dual-database architecture (SQLite + Firestore), JWT authentication, geolocation-based hospital discovery, and PDF medical report generation.

CNN-CONNECT-CLASSIFIER

April 2025 – May 2025

Intern Intelligence

- Developed CNN-Connect, a real-time image classification web app by training custom CNN on CIFAR-10 and building an end-to-end deep learning pipeline.
- Deployed an interactive interface for image uploads with instant predictions and class-wise confidence scores.

BRAIN TUMOR SEGMENTATION

May 2025 – June 2025

Arch Technologies

- Developed a brain tumor segmentation pipeline using YOLOv8 for detection and SAM for accurate mask generation on the BraTS 2021 dataset.
- Built an end-to-end solution with real-time visualization via Streamlit, focusing on precise segmentation and deployment-ready architecture.

FAKE NEWS DETECTION

May 2025 – June 2025

Air University

- Developed a Fake News Detection system using NLP and machine learning with text preprocessing and model training for accurate classification.
- Deployed an interactive web interface enabling real-time news analysis and predictions.

EDUCATION

AIR UNIVERSITY

Bachelor of Science in Software Engineering

Sep 2023 – July 2027

CERTIFICATES

WHAT IS GENERATIVE AI?

LinkedIn

- Developed a solid understanding of Generative AI, including different model types, ethical considerations, and real-world applications.
- Gained practical knowledge of AI-generated content, NLP models, and Variational Autoencoders (VAEs) for tasks like anomaly detection.

OTHERS

- Technical Skills: Python, SQL, Data Analysis, Machine Learning, Deep Learning
- Languages: English, Urdu
